Informational Interview Proposal

I.   Some career options I have considered are in music (as a pianist), as an IT

        professional, and as a sketch artist. I obviously chose being an IT professional.

        The businesses I have had the opportunity to work at have been education (AMI,

        INC and Kaplan University), healthcare (Ormond and Halifax Hospitals), and

        private sector work (NASCAR and side military jobs). Why I chose healthcare

        is because it is a worthy cause. The reason behind the private sector work was to

        gain more IT experience. And finally, the reason I have chosen education was

        because of the outstanding benefits.

II.   Who are you planning to interview and why have you chosen this person?

        I am planning to interview John Doe, a technical support analyst

        where I work. I have chosen him because he will be able to answer IT

        related questions that will be practical for this assessment.

III.   List 10 – 12 questions you plan to ask the professional you will be interviewing.

        What would you say are your key computer and IT skills are?

        How do you stay abreast with the ever changing technologies?

        Do you have computer related certifications?

        Which programming languages can you program in?

        How many successful computer projects have you completed?

        What database languages do you know?

Where do you see yourself 5 and 10 years from now?

What are you looking for in a new job opportunity?

How has your job responsibilities evolved throughout your career?

What you say is your greatest strength?

What you say is your greatest weakness?

What do you bring to the professional world?

Are you happy working in IT?
